

[Biotech Snapgene Crack](#)

The screenshot displays the SnapGene software interface. The main window shows a circular plasmid map for a construct named "Softpedia" (7235 bp). The map is annotated with numerous restriction enzyme sites, including BsrBI, AvrII, BspQI, SspI, HpaI, PfuI, NarI, KpnI, NheI, StuI, XbaI, SpeI, ScaI, DpnI, FspI, AseI, BspDI, PspOMI, ApaI, XcmI, EcoRV, PflFI, Tth111I, BamHI, SEC13.REV, BtgZI, Bpu10I, BlnI, NotI, AvaI, BsoBI, PaeR7I, TliI, XbaI, BmeT110I, PstI, SphI, and AflIII. Key features on the map include a GAP promoter, SEC13, an AOX1 terminator, mEGFP, and an AmpR gene. The right-hand panel provides details for the selected sequence "SEC13.REV" (1610..1640), indicating it is synthetic DNA and listing the laboratory host organism as "Pichia pastoris" and the bacterial transformation strain as "DH5 α ". The description field contains "www.softpedia.com". A red "PROTECTED IMAGE" stamp is overlaid on the bottom right of the screenshot.
